

Microsoft Office SharePoint Server

SharePoint is often referred to as a content management system or CMS, but it is so much more than that. It's a highly customizable, scalable platform that enables centralized, collaborative management of your entire content ecosystem in a sophisticated cloud-based environment. SharePoint's extreme versatility gives businesses of all sizes access to enterprise-class solutions that can revolutionize the way businesses get down to business. While SharePoint might seem friendly enough to dabble in on your own, it's like many powerful things, enticing, exciting and easy to use dangerously. If you want to use

Portal to Everything for Everyone

Higher Educations organization will benefit by using Microsoft SharePoint as their portal to everything for everyone. It provides Students, Faculty and Staff with a powerful, easy to use self-service portal with the ability to discover and manage the information important to them using only a browser.

The Students

Students will use the portal to discover and access campus-wide, as well as departmental or club-specific, information. SharePoint easily integrates and allows students to access the institution's Learning Management and Library Systems. Students will also be able to securely share documents and collaborate with Registrar, Financial Aid, Student Affairs offices, as well as other organizations.

Faculty and Staff

Faculty and Staff will use the portal to interact with others in their department and throughout the organizations within the academic institution. They will be able to securely share documents and information with HR, Payroll, and other organizations.

SEARCH

How in the world did we survive before Google?! How can your business thrive without your information assets visible and usable?

You spend a lot of time and resources generating, capturing and storing information. But if that information is difficult to find, then it all feels like wasted effort. When the business can't capture the moment, the relationship between IT and the Business suffers. Aoibri provides highly customizable search engine configurations for SharePoint, which seamlessly integrate all of your information assets into a single, easy-to-use, securely hosted solution.

SharePoint Search from Aoibri:
Sophisticated search options including related queries, tags, hierarchical searches, quick filters, meta data support, "search as you type," Boolean, people search and more. A fully functional user interface for desktops and mobile devices, scalable content and query performance, as well as visual navigation and relevance algorithms for a better user experience and more accurate search results.

Benefits for Faculty and Staff

- Departmental Calendars
- Easy access to Learning Management System
- Faculty and Staff Directory
- Use of Team Sites to provide access to all associated departments, organizations, clubs, etc.

Student Features

- News Feeds, Alerts and Announcements for important term, semester, academic deadlines and notices.
- Academic and Club Event and Activity Calendars
- Access to Student Directory
- Participation in Discussion Boards and Site Feeds – Blogging and Micro-blogging
- Team Sites provide access to all a students' associated departments, sports teams, clubs, etc.
- Powerful search tools to find content without having to navigate to the content.

IT Department

The IT department will benefit from the use of SharePoint as well by using existing infrastructure such as active directory and SQL Server databases. The department will save time and money because user access to groups and departments can be managed by non-IT department users.

Benefits for IT department:

- Leverage current active directory users
- Leverage Forms Based Authentication for external users
- User and Group Security framework for security trimming content
- User access to Team Sites can be controlled by non-IT personnel
- Easy integration with current Admissions and Registration software, Learning Management Systems, Salesforce, Microsoft software such as Outlook and SQL Server
- Leverage managed metadata and keywords for efficient security-trimmed searching
